Aphrody Dev

Systems engineer, Rust and Bun. Public identity: GitHub aphrody-dev, organisation aphrody-labs. Contact: contact@aphrody.com.

Every line below can be checked in the linked public repositories. Lines marked `TODO(owner)` are not verifiable from the repositories and stay empty until the owner fills them; no civil identity is published here.

Summary

Maintainer of a single Rust and Bun monorepo, aphrody-labs/src, that holds a multicall developer CLI, runtimes, desktop shells, an agent stack and the infrastructure that deploys them. Works upstream first: changes that belong to Bun or to open agent protocols are sent to those projects as pull requests.

Selected work (aphrody-labs/src)

Project	What it is	Path
ay	One multicall CLI for the monorepo: architecture gate, locks, VCS tooling, Chromium tools, toolchain install, benchmarks	`crates/ay`
nt	A model of the machine's Windows NT, rendered entirely by the GPU on the Microsoft stack	`apps/nt`
ai-os	Agent core, model bridge discovered at run time, relay (MCP, A2A, ACP), gateway and TUI in one Bun package with no npm dependency	`packages/ai-os`
aphrody.app	Rust WebGPU/WGSL tiling desktop shell with CRDT state, OPFS storage and WebMCP tools	`apps/aphrody-app`
unixwin	Native Windows bash in Rust, with coreutils, an MSVC git and a package manager	`apps/unixwin`
Brand pipeline	`ay brand build`: Material 3 tokens, outlined SVG, ICO/PNG, social cards and ANSI banners rendered with resvg/usvg/tiny-skia	`crates/aphrody-brand`

Monorepo languages, GitHub linguist bytes on 2026-11-13: Rust 81.1 %, Python 8.0 %, TypeScript 6.4 %, C 1.6 %, JavaScript 1.4 % (source).

Upstream contributions

Open pull requests as of 2026-11-13 (none merged yet):

- oven-sh/bun #48787: build, pass the `.bind.ts` schema list to the codegen scripts in a file.
- oven-sh/bun #48786: docs, sizes `Bun.gzipSync` and `Bun.deflateSync` give for the utils examples.
- oven-sh/bun #48784: build, xwin 0.10.0, which reads the current Visual Studio manifest.
- agentclientprotocol/agent-client-protocol #2804: docs, `availableCommands` marked required.
- a2aproject/A2A #2452: docs, required `messageId` in `Message` examples.

Technical areas

- Rust 2024 on a pinned nightly with cross-language LTO against the shared LLVM toolchain.
- Bun as the only JavaScript runtime and toolchain (scripts, tests, bundling, FFI).
- Windows platform: windows-rs, Direct3D 12, WinUI 3; Linux fleet with systemd and nginx.
- Material 3 design systems: HCT dynamic color, tokens, accessible contrast checked in tests.

Experience

- TODO(owner): roles and dates you choose to publish under the aphrody-dev identity.

Education

- TODO(owner): optional; omit to stay anonymous.
